

SECURITY

SERVICES AND PRODUCTS

What can WUL4 contribute in Security?

WUL4 is highly specialized in security of software platforms and architectures.

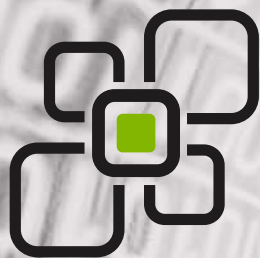

The spectrum of services and products offered cover the following aspects:

- Implementation & compliance with security standards (PCI-DSS, ISO-27001, Data Privacy Act, etc).
- PKI out of the box appliance. Specialized solution for a quick roll-out of Digital Signature & PKI as with CoSign.
- Hardening of perimeteral security solutions, such as, solutions from Astaro Security Gateway, a Unified Threat Management System including Firewall, VPN, IPS, Antivirus, Antispam, Email encryption, Web Filter, Web Application Firewall, and Wireless Security.
- Ethical hacking services over your system, web applications and infrastructures, in order to detect any possible vulnerability; proposing solutions to fix them before they could get exploited.
- Support and Consultancy related to network security, system architecture and software design & implementation.
- Soporte y Consultoría relacionadas con la seguridad de la red, la arquitectura del sistema y el software.
- Training your software architects & developers on secure coding and security aspects.
- We support the OWASP community contributing and participating in their initiatives.

WUL4's experience in payment systems and security allow the company to provide services and products which are effective to ensure the security of your systems.
